### Standard design

housing	: cast steel 1.0619, stainless cast steel 1.4408
gasket	: HD 3822, PTFE
KITO® flame arrester element	: completely interchangeable
KITO casing	: steel (galvanized to NG 400), stainless steel mat. no. 1.4571, 1.4581
KITO grid	: stainless steel mat. no. 1.4310, 1.4571
bolts/nuts	: galvanized steel, SS
temperature sensor	: PT 100 (option); connection 3/8"
flange connection	: DIN EN 1092-1 form B1, ANSI 150 lbs. RF

### Application

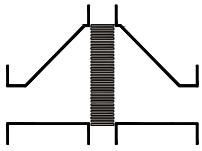

For installation into pipes to the protection of vessels and components against deflagration of flammable liquids and gases. Approved for all substances of explosion groups IIA1 to IIB3 with a maximum experimental safe gap (MESG)  $\geq 0.65$  mm. Bi-directionally working in pipes, whereby an operating pressure of 1.2 bar abs. and an operating temperature of 60°C must not be exceeded. The distance between a potential ignition source and the flame arrester must not exceed 50 times the inner pipe diameter. The installation of the deflagration flame arrester into horizontal and vertical pipes is permissible.

When equipped with one or two temperature sensors, the devices are protected under atmospheric conditions against a short time burning by a burning time  $t_{BT} = 1,0$  min.

If only one temperature sensor, then it is to be placed on the device side where a burning could be expected.

### Example to order:

**KITO® EFA-Def0-IIB3-100/40-1.2-T**  
(design with thermo couple element)

**Bi-directional deflagration flame arrester  
EFA-Def0-IIB3-.../...-1.2  
EFA-Def0-IIB3-.../...-1.2-T (-TT)**

The flow capacity  $V$  refers to a density of air with  $\rho = 1.29 \text{ kg/m}^3$  at  $T = 273 \text{ K}$  and a pressure of  $p = 1.013 \text{ mbar}$ .  
The flow capacity for gases with different densities can be calculated sufficiently accurate by the following approximation equation:

$$V = V_b \cdot \sqrt{\frac{\rho_b}{1.29}} \quad \text{or} \quad V_b = V \cdot \sqrt{\frac{1.29}{\rho_b}}$$
