Application

As breather/venting safety device for small tank facilities, explosion proof for flammable fluids of explosion group IIB3 with a gap width (NSW) ≥ 0.65 mm. This device is not permitted to be installed in enclosed areas. Structure on storage tanks, tank covers or at the end of ventilation pipes. The end armature prevents passage of flame into the tank. The gases enter the storage medium unimpeded into the atmosphere.

Flow capacity V based on air of a density $\rho = 1.29 \text{ kg/m}^3$ at $T = 273 \text{ K}$ and atmospheric pressure $p = 1.013 \text{ mbar}$. For other gases the flow can be approximately calculated by

$$\dot{V} = \dot{V}_b \cdot \sqrt{\frac{\rho_b}{1.29}} \text{ or } \dot{V}_b = \dot{V} \cdot \sqrt{\frac{1.29}{\rho_b}}$$
