### Description

The TM Series Mass Flow Meter utilizes the Coriolis principle of operation to measure mass flow. Density and temperature are simultaneously monitored and volumetric flow is additionally calculated with these parameters. The TM Series is available with a direct mounted transmitter or in a remote mounted configuration.

The TM Series can be used to meter nearly all liquid or gaseous media. Available in a variety of end connections, the TM can be used in many applications. The TM Series is also used for precise dosing applications.

The TM Series has following unique features:

- Superior accuracy
- Industry's widest selection of wetted materials
- Thick pipe wall construction for ultrahigh pressure capability
- Superior heating jacket technology

### Application Areas

- Chemical industry
- Petrochemical industry
- Food industry
- Oil industry
- Gas industry
