KAL-K

- Range: approx. 4 ... 200 cm/s
- p_{\max} : 100 bar
- Temperature of medium: -20 ... +80 °C
Option: 0 ... +120 °C
- Process connection:
G 1/4, G 1/2, G 3/4
M12x1, 1/4" NPT, 1/2" NPT, 3/4" NPT
Tri-Clamp®
- Material sensor:
1.4305; 1.4301; 1.4404; 1.4571
- Intelligent temperature compensation
- No moving parts
- Minimal pressure loss

Method of operation

The model KAL-... electronic flow monitor continuously monitors water-based liquids. It is suited for securely monitoring flows with minimum pressure loss. Sensitivity to soiling is significantly reduced by means of a single-part sensor.

Theory of operation

The operation of the model KAL-... electronic flow monitor is based on the calorimetric principle. The end face of the sensor is heated to a few degrees above the temperature of the flow medium. When the medium flows, the heat generated in the sensor is transferred to the medium, ie, the sensor is cooled. The cooling procedure is an accurate measure of the flow velocity.

The sensor signal is compared with the reference data stored in a microcontroller. An alarm signal and/or an analogue signal (4-20mA) that is proportional to the flow velocity is output if the actual flow velocity deviates from the desired flow velocity. The microcontroller allows the flow indicator to be easily calibrated and the temperature to be compensated.

Features

- Optimal temperature compensation
- Intelligent switching
- Measuring range adjustment
- No moving parts
- Easy to install and commission
- Minimal pressure loss
- Easy to use

Measuring /switching ranges

NW [mm]	approx. measuring range l/min water	NW [mm]	approx. measuring range l/min water
8	0.12 - 6.0	40	3.0 - 150
10	0.19 - 9.4	50	4.7 - 235
15	0.42 - 21.8	60	6.8 - 340
20	0.75 - 37.7	80	12.0 - 603
25	1.18 - 59.0	100	18.8 - 942
30	1.7 - 84.8	150	42.4 - 2120

Important: The flow velocity has been converted for the nominal pipe size for the specified measuring ranges. Please note that the flow velocity approaches zero in the pipeline in the direction of the wall. Depending on the nominal pipe size, depth of engagement of the sensor, and flow profile, the deviations from the specified flow rates can be of considerable magnitude.

Temperature compensation

The temperature of the KOBOLD flow monitor is compensated with a microcontroller. All data required for temperature compensation are stored in EEPROMS, and are maintained for at least 10 years after power failure. The instruments may be easily adjusted by the customer to suit process conditions.

The measured flow rate is compared with the zero-point adjustment values stored in the EEPROM and the stored characteristic curves. The data is processed by the microcontroller and controls the alarm signal or the analogue output.

The sensor switch point is absolutely consistent, as the sensor has been adapted to suit the process data.

Drift of the switch point by temperature influence

Range of models

Compact devices

- KAL-A... Flowmeter with analogue output (4-20 mA)
- KAL-AK Flowmeter /-monitor with analogue output (4-20 mA) and alarm signal (PNP/NPN, N/O contact)
- KAL-K... Flow indicator alarm signal (PNP/NPN, N/O contact)

Separate version

- KAL-... Sensor
- KAL-E1... Electronics with relay contact for flow monitoring
- KAL-E2... Electronics with relay contact and trend display for flow monitoring
- KAL-E3... Electronics with relay contact for flow and temperature monitoring trend display for flow monitoring

Technical Details (electronics)

Case material: glass-fibre-reinforced polyamide
 Sensor material: Stainless steel (see order details)
 Power supply: 24 V_{DC} ±10 %
 110 V_{DC} ±30 %, 110, 230 V_{AC} -20/+10 %
 Power input: max. 4.5 W (typically 1,2 W)
 max. 3.6 W for 24 V_{DC}
 Ambient temperature: -20 °C ... +60 °C
 Medium: water-based (water content at least 90 %); not suitable for oils and fuels
 Temperature of medium: -20 °C ... +80 °C (standard version)
 0 °C ... +120 °C (high temp. version)
 CIP compatibility: max. 140 °C non-operating
 Max. pressure: 100 bar
 Warm up time: max. 12 s
 Switching range: approx. 4 cm/s to 200 cm/s
 Temperature gradient: unlimited
 Response time: 5.6 ... 12 s typically
 on request: 2- 5.6 s (KAL-KS...)
 Flow rate indication: trend display with 8-digit LED chain
 Switch point adjustm.: with potentiometer, optical indication
 on LED chain with flashing LED
 Output indicator: LED, red = alarm,
 green = flow OK
 Electr. connection: cable gland M16x1.5; connector
 M12x1 (only 24 V_{DC} version)
 circular connector 1/8" with socket
 (230/115 V-versions) or
 connector M12x1 with socket and
 2 m cable, 24 V_{DC} version

Switch output:
 24 V_{DC} version: semiconductor, PNP/NPN
 switchable, max. 400 mA,
 short-circuit proof
 relay max. 0,2 A /110 V_{DC}
 110 V_{DC} version: relay max. 5 A
 110 V_{AC}, 230 V_{AC} version: actual value ≥ setpoint value;
 (standard setting: green LED
 is energized) output switched
 available as option
 N/O function: IP 65
 N/C function:
 Protection:

Electronic Flow Monitor - Separate Version Model KAL-E(H)

Technical Details (sensor)

Material:	case: see order details cable: PVC option (KAL-...HT): silicone cable gland: brass nickel-plated, Pg 7
Cable:	2 x 0,56 mm ² , length = 2 m max. line length 100 m
Switching range:	4 cm/s ... 200 cm/s
Temperature of medium:	-20 °C ... +80 °C, option (KAL-...HT): 0 °C ... +120 °C
Ambient temperature:	-20 °C ... +80 °C, KAL-...HT: 0 °C ... +120 °C
Max. pressure:	100 bar (KAL-1132 and KAL-1140: 25 bar)
Protection:	IP 68
Approval:	ATEX: II 1G Ex ia IIB T4 Ga IECEX: Ex ia IIB T4 Ga

Important! For cable lengths >10 m, the client can increase the absolute switching accuracy manually by adjustment (cable resistance must be considered).

Electronics Model KAL-E(H)..

Power input:	max. 3.6 W
Switch capacity:	max. 250 V, max. 3 A
Switch point adjustm.:	with Potentiometer
Switching function:	changeover, on rising flow (terminals 9 +10 closed)
Option (KAL-E3.):	changeover, on rising temperature below setpoint, LED is energized (terminals 12 + 13 closed)
Output:	changeover relay
Output indicator:	with LED
Warm up time:	max. 12 s
Temperature range:	-20 ... +80 °C
Accuracy:	temperature limit value ±2%
Repeatability:	approx. 2%
Response time:	5 ... 12 s (typically)
DIN rail fitting:	DIN EN 50022 and DIN 46277
Protection:	case: IP 40, terminals: IP 20
Case:	polycarbonate, L75 x W 55 x H 110 mm
Sensor output:	short-circuit proof, cable break is detected as flow stoppage
Power failure:	calibration data are store without battery for 10 years
Approval:	ATEX: II (1)G [Ex ia Ga] IIB IECEX: [Ex ia Ga] IIB
